

Reggae

A must for all ornamental lawns!

- Excellent aesthetic aspect.
- Excellent summer behaviour.
- Very dense sward.

Excellent aesthetic aspect

Musette is a beautiful slender creeping red fescue, particularly suitable for lawn use but the variety can also be used for close mowing purposes thanks to its good shoot density

Excellent summer behaviour

In summer Musette is able to keep a nice green colour. The variety is able to withstand dry conditions without discolouring.

Very dense sward

Musette has a great shoot density due to a high regeneration capacity. Especially under mild to warm conditions the variety performs very well. For that reason Musette obtained an excellent rating on the French turf variety list ('*Catalogue Officiel Francais*')

Festuca rubra tricho

Slender creeping red fescue is a high ornamental specie as well. It is as fine and dense as chewing fescue, but it outperforms chewing fescue due to an excellent disease resistance. Slender creeping fescues also exhibit good summer and autumn colour and it has better salt tolerance than chewing fescue.

The main difference with chewing fescue is the occurrence of rhizomes which gives the slender creeping fescue a better wear tolerance. Also here, mowing levels

- Atlantic climate
- Nordic climate
- Continental
- Mediterranean

Characteristics

Speed of establishment

Fineness of leaves

Self recovery capacity

Colour darkness

Green up after winter

Fusarium resistance

Resistance to dollar spot

Resistance to red thread

Less irrigation required

Less nitrogen required

Less frequent mowing possible

Cool temperature germination

Close mowing tolerance
